

Mohamed Bilel Khadhraoui

Embedded Software Engineer

 mohamedbilel.khadhraoui@insat.ucar.tn  Mohamed Bilel Khadhraoui  AKhadhraoui47  My Portfolio

EDUCATION

Master of Engineering in Embedded Systems 09/2020 – 09/2025 | Charguia, Tunisia
National Institute of Applied Sciences and Technologies
Control Theory • Electronics • Algebra • Calculus • Assembly • UML • OOP • Algorithms • Linux

WORK EXPERIENCE

Software Engineer - E-Mobility, *Watt&Well*  03/2025 – Present | Massy, France

- Integrating of smart meters in Charging Stations software ecosystem for authenticated consumption tracking
- Implementing German calibration-law-compliant billing for EV charging (Eichrecht)
- Extended EVI functionalities to enable advanced commandability of externally constructed Power Units following the V cycle model.
- Architected a CANopen-to-CAN gateway in Golang  to ensure compatibility with power units from multiple vendors (Infy, UUGreenPower ...)
- Enabled integration and control of up to 8 external power units, enhancing power system scalability

Embedded Linux Intern, *STMicroelectronics*  07/2024 – 09/2024 | Tunis, Tunisia

- Conducted an in-depth exploration of the OpenSTLinux distribution and boot chain of MP135 microprocessor; U-Boot, TF-A, OP-TEE, Kernel
- Crafted a high-performance kernel module  for the Grove WiFi V1/V2 module using the TTY framework for serial communication (UART).
- Designed and implemented a Command Line Interface (CLI)  in C, delivering efficient abstraction and control of the kernel module.
- Authored Yocto recipes for Device Tree configuration and cross-compilation, ensuring seamless deployment on the MP135  Microprocessor.

Embedded Software Engineer, *Shanon Technologies*  09/2023 – 01/2024 | Toulouse, France

- Benchmarked ShanonDSPWizard through complex block diagram implementation, performance evaluation, and live demonstration.
- Developed a cross-platform Software Abstraction Layer for STM32H723 FMAC Peripheral, enhancing portability and IIR/FIR filters implementation.

Embedded Software Intern, *Shanon Technologies*  07/2023 – 08/2023 | Toulouse, France

- Studied and analyzed the performance and hardware limitations of STM32H723 CRC and CORDIC hardware accelerators.
- Designed a cross-platform middleware for CORDIC and CRC, providing APIs for configuration, manipulation with a technical documentation.
- Expanded the STM32H723 CORDIC's and FMAC's function range by implementing a recursion-based approach for mathematical decomposition to address the fixed-point system.

PROJECTS

Orca Project  11/2025 – 08/2026

- Reduced Linux kernel image size by 96% (from 450 MB to 15 MB) by stripping unnecessary modules and retaining project-specific drivers.
- Accelerated boot time by 2x through optimization of U-Boot env variables and implementation of a customized Fastboot command sequence.
- Automated reproducible builds by version-locking all required meta-layers in a KAS configuration, leveraging KAS-Container for builds.

Linux From Scratch  12/2025 – 01/2026

- Bootstrapped a complete cross-toolchain from source, starting with Binutils (linker and assembler) and a two-stage GCC compiler.
- Isolated the final filesystem build process inside a chrooted environment to ensure clean, reproducible, and build-independent packages.
- Built all essential utilities and packages (such as coreutils, diffutils, and Python 3) from source using a third-stage native toolchain.
- Compiled the GRUB bootloader and configured the Linux kernel to generate a UEFI-bootable image.

International Robotics Competition - Eurobot 11/2022 – 06/2023

- Realized autonomous mechanical systems for advanced automation; 3 DoF Robotic Arm, Rolling base.
- Optimized Dijkstra-based path planner using 2D geometric model of the robot's environment, achieving 4x faster computation-to-travel time.
- Integrated a state machine within the ROS environment using Python 3, enabling seamless mechanical synchronization.
- Formulated a control algorithm implemented on an STM32H745 MCU, employing odometry and PID control for enhanced maneuverability.
- Fine-tuned 12 parameters of the PID control algorithm to achieve an error margin of less than 1 mm from the desired coordinates.

SKILLS

Computational Thinking: Composition/Debugging/Abstraction | **Embedded Peripherals:** GPIO/TIMER/ADC/DAC/CORDIC/FMAC/CRC | **Microcontrollers:** STM32/ATmega/ESP32 | **Softwares:** CubeIDE/CubeProgrammer | **Programming:** Embedded C/Go/Bash/Python/C++ | **Test Equipements:** Logic Analyzer/Oscilloscope | **Microprocessors:** Raspberry Pi/STM32MP | **Version Control System:** Git/Github | **Communication Protocols:** UART/I2C/SPI/CAN/CANopen | **Embedded Linux:** Yocto/OpenSTLinux/Makefile/Cross Compilation/Kernel Dev

ORGANIZATIONS

Son FM , Radio Presenter 06/2024 – 10/2024

- Led the MagTech IT Segment live, delivered tech insights to over 5000 listeners and produced engaging content  with over 9000 interactions.

TechMag , Digital Creator 01/2024 – present

- Produced high-quality digital content on advanced deeptech topics, engaging an audience of over 10,000 viewers on social platforms.

IEEE RAS INSAT Student Branch , Technical Trainer 09/2022 – present

- Spearheaded more than 5 workshops; Embedded Linux, STM32 in collaboration with 3 different institutes, hosting more 30 participants each.
